Analytic Framework: Team-Based Care for Diabetes Management

Improved Patient Support
- Treatment & medication management
- Adherence support
- Support for self-management & behavior change

Improved Systems Support
- Decision support tools
- Information systems
- Surveillance system

Person with Diabetes

Improved Health Processes and Patient Experience
- Testing & monitoring:
  - A1c testing
  - Cholesterol testing
  - Blood pressure monitoring
  - Weight monitoring
- Patient adherence
- Diabetes self-management
- Patient experience with care

Improved Intermediate Health Outcomes
- Glycemic control
- Lipid control
- Blood pressure control
- Weight control

Reduced Complications
- Retinopathy/decreased vision
- Periodontal disease
- Peripheral neuropathy
- Foot lesions, amputations
- Renal disease
- Cardiovascular disease
- Cerebrovascular disease

Health Care Utilization, Quality of Life, and Mortality
- Reduced hospitalizations & ED visits
- Improved Overall Quality of Life (QOL)
- Improved physical health
- Improved mental health (including depression)
- Reduced Mortality

Legend:
- Intervention
- Intermediate Outcomes
- Recommendation Outcomes
- Target Population
- Causal relationship
