Analytic Framework: Reducing Client Out-of-Pocket Costs for Evidence-based Tobacco Cessation Treatments

Promotion of policy or program directed at both clients and providers

- Increased awareness of a benefit
  - Tobacco users thinking about quitting
  - Increased motivation to quit
  - Tobacco users intending to quit

- Increased awareness of client cessation benefits among providers
- Increased and improved provider-client interactions on quitting

- Increase in use of evidence-based cessation treatments
- Increase in tobacco users attempting to quit

- Increase in tobacco users successfully quitting
- May reduce tobacco-related disparities

Key Effect Modifiers
- Extent of promotion
- Magnitude (value) of the reduced costs to clients
- Requirements to obtain treatments at reduced cost
- Presence or absence of other interventions
