Figure 1. Analytic framework: Interventions to increase client access to cancer screening services. The model shows hypothesized relationships between interventions to increase community access, a series of intermediate steps, and ultimate (desired) health outcomes.

- **Reduce barriers**
  - Structural
  - Out-of-pocket cost

- **Increase access**
  - Physical
  - Economic

- **Increase completed initial or repeat screening** (Early detection)

- **Change client intent**
  - Attitude
  - Perception

- **Efficacy Established**

- **Follow-up**
  - Diagnosis
  - Treatment

- **Decrease**
  - Incidence
  - Morbidity
  - Mortality

Oval = intervention
Round-cornered boxes = mediators or intermediate outcomes
Square-cornered box = desired health outcomes
