Summary of Community Preventive Services Task Force Recommendation

The Community Preventive Services Task Force (CPSTF) recommends targeted school-based cognitive behavioral therapy programs to reduce depression and anxiety symptoms among school-aged children and adolescents who are assessed to be at increased risk for these conditions.

The CPSTF also recommends Universal School-Based Cognitive Behavioral Therapy Programs to Reduce Depression and Anxiety Symptoms.

Major Findings

The CPSTF recommendation is based on evidence from 29 studies identified in a systematic review published in 2017.1

- Small decreases were reported for symptoms of depression (21 studies) and anxiety (14 studies).
- Intervention delivered by external mental health professionals showed larger effects than those delivered by trained school staff.

What are targeted school-based cognitive behavioral therapy programs?

These programs are delivered to students who report increased symptoms of depression or anxiety. The programs help students develop strategies to solve problems, regulate emotions, and establish helpful patterns of thought and behavior.

School-external mental health professionals (e.g., non-school psychologists, social workers) or trained school staff (e.g., school mental health professionals, trained teachers, nurses) use therapeutic approaches outlined in an intervention protocol to engage with students in individual or group settings. Note: these programs are provided to students who are at risk, which is not the same as clinical treatment for children with diagnosed mental disorders.

Facts about Anxiety and Depression

- Depression and anxiety are common among children and adolescents, and they can persist into adulthood, increasing risks for suicide, risk-taking behavior (e.g., substance abuse, sexual experimentation), teenage pregnancy, conduct disorder, delinquency, and poor academic outcomes.1-3
- Among children aged 3-17 years, 3.2% have diagnosed depression and 7.1% have diagnosed anxiety.4

---

Established in 1996 by the U.S. Department of Health and Human Services, the Community Preventive Services Task Force (CPSTF) is an independent, nonfederal panel of public health and prevention experts whose members are appointed by the director of CDC. The CPSTF provides information for a wide range of decision makers on programs, services, and other interventions aimed at improving population health. Although CDC provides administrative, scientific, and technical support for the CPSTF, the recommendations developed are those of the CPSTF and do not undergo review or approval by CDC.
